Cover Letter for Software Engineer at Influx

I am a software engineer with a strong focus on building products that solve real-world problems. My experience includes developing a wide range of applications, such as a daily expense tracking app to help users manage their finances and a YouTube-like platform called YTKidd, specifically curated content for children's safety. These projects showcase my ability to combine technical skills with an understanding of user needs to deliver impactful products.

Furthermore, I am deeply intrigued by the potential of Artificial Intelligence and its ability to revolutionize various industries. I have actively explored AI technologies like text-to-speech, speech-to-text, and computer vision. Though I only used the final product (not going in deep), I believe these innovations can be leveraged to enhance the products and services we create.

While my professional experience has been primarily focused on backend development, I possess a strong understanding of frontend technologies, enabling me to deliver full-stack solutions. I have also successfully developed and launched multiple products, giving me a deep understanding of the entire product lifecycle, from ideation to production and user adoption.

I am confident that my skills and experience align with the requirements of this position.

Thank you for your time and consideration. I look forward to discussing my qualifications further.

Sincerely,

M. Umar Ramadhana
